Berlin · Europe · Remote

Product leader with 9+ years in B2B, B2C, platform and infrastructure products and 4 years running a product department of 4 teams. I build products and teams from zero and turn around underperforming ones: launched company-wide enterprise search (83% adoption, 94% Hit@5), scaled a design system to 30+ product teams and 10+ external partners with 25% lower design and frontend costs, and repositioned a low-adoption developer portal into the mandatory internal platform for Infrastructure.

Mostly I use AJTBD research to find where value is lost, make explicit trade-offs under uncertainty and validate through short iterations. I run lean, low-overhead teams with clear ownership, transparent metrics, automation and AI.

SKILLS

Product: Product Strategy & Vision · Product Discovery (JTBD, CJM, Customer Interviews) · Market & Competitive Analysis (SWOT / TOWS) · Unit Economics & Business Case · Roadmapping & Prioritization (RICE, ICE) · Hypothesis Testing & A/B · Product Metrics & Analytics (Amplitude, GA4, Yandex Metrica, HEART) · OKR / KPI · Working Backwards / PRFAQ · Executive Reporting / QBR

Domain: Platform & Infrastructure Products · Internal Developer Platforms (Backstage) · Developer Experience (DevEx) · Enterprise Search · Docs-as-Code · Design Systems · Open Source Products · B2B Web & Mobile Apps (iOS, Android) · Hardware-integrated Products (Security & ATM Equipment)

Leadership: People Management (1:1s, 360° Feedback, Performance & Compensation Reviews, 9-Box, IDPs, PIPs) · Hiring · Team Building & Mentoring · Cross-functional Leadership · Stakeholder Management (RACI)

Delivery: Portfolio Management & Product Pitching · Quarterly Planning & Capacity · Agile / Scrum / Kanban · Specs, DoR / DoD · Milestones & Risk Management · Lead & Cycle Time · Jira / YouTrack · Process Automation

AI & Tools: Claude Code · AI-assisted Prototyping (Vibe Coding) · AI Market Modeling · Figma AI

PROFESSIONAL EXPERIENCE

Independent Product & Delivery Consultant (self-employed) | Aug 2026 – Present

Project-based engagements helping companies set up product and delivery management: planning, ownership, transparency and predictable delivery.

Key projects

- **Kontur.Logistics — from weekly sprints to a managed initiative portfolio.** Took over a 17-person team with several product and technical streams, where planning was limited to a one-week sprint and the whole team spent hours a week in Agile meetings. Split the team into delivery pods of 3–4 people aligned to product streams, assigned initiative owners, introduced quarterly planning with capacity, dependency and priority assessment, and set up YouTrack boards for progress, workload and blockers. **Result: planning horizon extended to 1.5 quarters, meetings cut by 50%, plan and report preparation reduced from ~1 week to a few hours**; stakeholders track initiative status themselves instead of asking in DMs.

Semrush · Head of Development Enablement · Aug 2022 – Jul 2026 (4 years)

Built the department from scratch during the Infrastructure reorganization, growing its scope from Knowledge Sharing to Development Enablement. Researched engineering and infrastructure workflows across the organization to define the problem space, product strategy and portfolio. Built and led 4 teams — 3 product teams and one technical writing team — and owned department strategy, hiring and performance management.

Key achievements

- **Enterprise search, 0 → 1.** Turned a request for "one more knowledge base" into a root-cause fix: research showed the problem was content quality and findability, not a missing platform. Launched cross-platform search over 20+ knowledge sources with personalized results and role-based access: **94% Hit@5, 83% company-wide adoption, +60% MAU/DAU** after expanding beyond engineering to support, legal and management — with no extra development scope.
- **Developer portal turnaround.** Took over a low-adoption Backstage portal built around costly, rarely used Golden Paths. Uncovered a missed segment, shifted to a platform model. Aligned senior technical leadership to make the portal **the mandatory single entry point to Infrastructure**, replacing custom solutions. Result: steady adoption growth, CSAT at "completely satisfied", first decline in the cost of infrastructure routine and support; 3-quarter roadmap.
- **Technical writing at scale.** Scaled support **from ~10 to ~30 engineering teams** at the same delivery speed, with satisfaction at ~5/5. Replaced ad-hoc requests with a predictable intake and delivery workflow; documentation linters reached **100% adoption across Infrastructure**; moved public API documentation to Docs-as-Code (Semrush API v4).
- **Product Pitching.** Replaced single-manager approval with a Working Backwards–based pitching process (value, scope, resources, success criteria) and rolled it out across **4 Infrastructure departments (~20 POs and leads)**. Initiatives that used to drag on for up to a year were split into short stages, with dependencies surfaced before work started.
- **Metrics-first.** Defined success metrics and analytics requirements at the design stage, instrumented frontend and backend, and built Amplitude dashboards for product health, hypothesis validation and launches.

Semrush | Product Owner · Aug 2020 – Dec 2022 (2 years 5 months)

Owned the design system as an internal platform product used by 30+ product teams and 10+ external partners.

Key achievements

- Scaled to 100+ React components and UX patterns: **100% adoption across Semrush products, −25% product design and frontend development costs.**
- **CSAT 3.3 → 4.7** through continuous discovery and feedback-driven prioritization.
- Open-sourced the system to remove the partner bottleneck: **standards transfer cut from ~5 days to near zero**, with a scalable model for external contributions.
- Replaced subjective health checks with quantitative monitoring of adoption, versions, requests and incidents per component.
- Made the system the foundation for company-wide accessibility and redesign: **30+ teams adopted new standards on schedule** without disrupting delivery.

C-Nord | Product Manager · Oct 2017 – Aug 2020 (2 years 11 months)

Web and mobile products connecting security hardware with digital services for private security companies and banks.

- Ran discovery across the full ATM service chain — from cash collectors to monitoring operators — and launched web and Android apps integrated with security hardware, **unblocking an equipment supply contract with a major Russian bank.**
- Applied the same approach to public web, iOS and Android apps for security engineers, **unlocking several more B2B contracts.**
- Customer mobile app: **200,000+ installs, 4.7★.**
- Set up product management end to end: feedback collection, roadmap, prioritization and release management.

BIA Technologies | System Analyst · Oct 2015 – Aug 2017 (1 year 11 months)

Worked at the intersection of business and software development: analyzed requirements, prepared technical specifications, and managed project implementation.

- Analyzed and formalized customer requirements, prepared technical documentation, and tested product functionality.
- Identified bottlenecks in business processes and proposed solutions for process optimization and automation.
- Managed projects by assigning tasks to developers and monitoring delivery timelines and quality.
- Participated in projects related to transportation logistics and financial accounting.

Nova Team | Business Analyst · Jan 2014 – Sep 2015 (1 year 9 months)

Worked in a consulting company, helping clients optimize business processes and improve operational efficiency.

- Analyzed and optimized clients' business processes and developed process maps, procedures, and operating instructions.
- Conducted training sessions for client managers on the implementation and improvement of internal processes.
- Developed employee motivation systems and sales standards for clients.
